

1. Download Community Server <https://www.mongodb.com/try/download/community>
2. Install MongoDB Community through terminal, type “brew tap mongodb/brew”

Installing MongoDB 4.4 Community Edition

Follow these steps to install MongoDB Community Edition using Homebrew's **brew** package manager. Be sure that you have followed the [installation prerequisites](#) above before proceeding.

1. Tap the [MongoDB Homebrew Tap](#) to download the official Homebrew formula for MongoDB and the Database Tools, by running the following command in your macOS Terminal:

```
brew tap mongodb/brew
```

If you have already done this for a previous installation of MongoDB, you can skip this step.

2. To install MongoDB, run the following command in your macOS Terminal application:

```
brew install mongodb-community@4.4
```

3. Install MongoDB, type “brew install mongodb-community@4.4”
4. Run MongoDB Community Edition, type “brew services start mongodb-community@4.4”
5. Connect and use Mongo, type “mongo”
6. Download Mongo Compass <https://www.mongodb.com/try/download/compass>
7. Create Database

Databases

Performance

CREATE DATABASE

Database Name ^	Storage Size	Collections	Indexes	
EEW	17.4MB	3	3	
admin	20.0KB	0	1	
config	36.0KB	0	2	
local	20.0KB	1	1	

Performance

Create Database

Database Name

Collection Name

☐ Capped Collection ⓘ

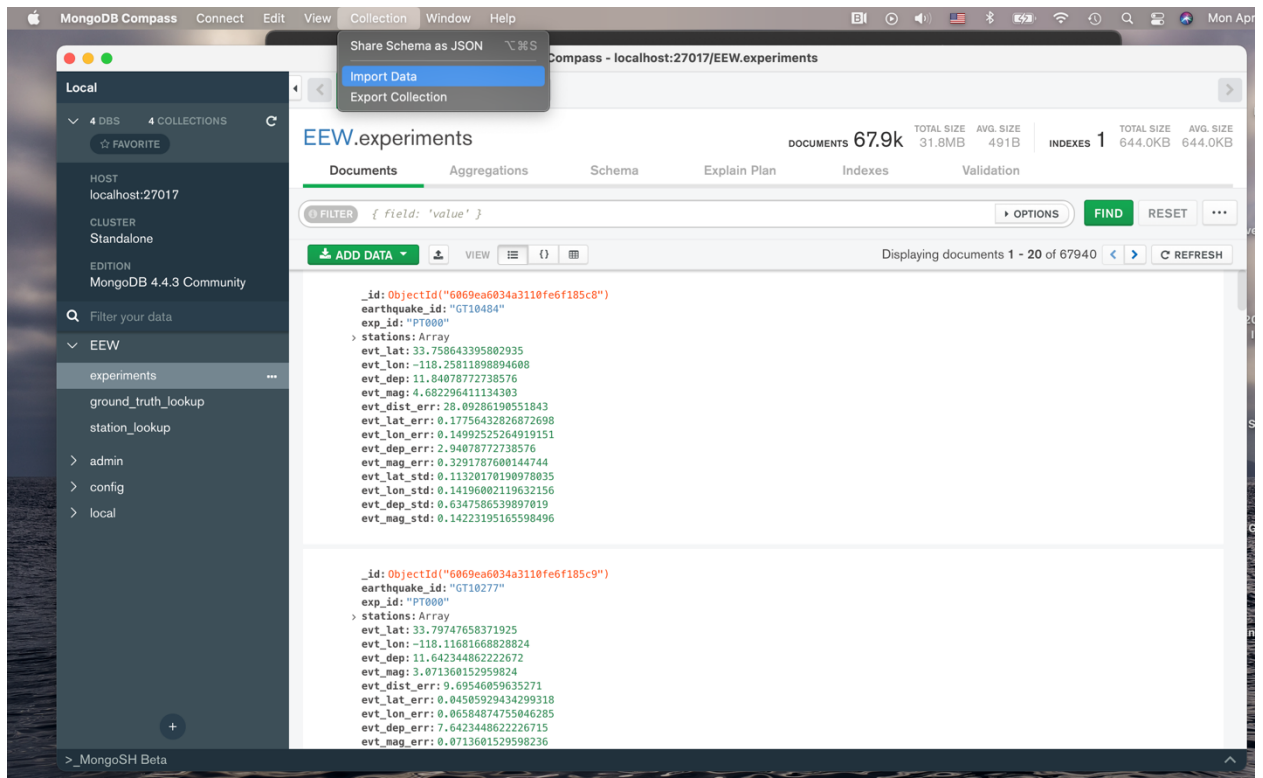

☐ Use Custom Collation ⓘ

Before MongoDB can save your new database, a collection name must also be specified at the time of creation. [More Information](#)

8. Create Collection

Collections						
CREATE COLLECTION						
Collection Name ▲	Documents	Avg. Document Size	Total Document Size	Num. Indexes	Total Index Size	Properties
experiments	67,940	490.5 B	31.8 MB	1	644.0 KB	
ground_truth_lookup	5,232	413.6 B	2.1 MB	1	84.0 KB	
station_lookup	266	110.3 B	28.7 KB	1	20.0 KB	

9. Import Collection

Select the corresponding collection json file (experiments.json, ground_truth_lookup.json, station_lookup.json) to import database collection
Please download the collection file here
